

How to Print from Chromebook

To print from your Chromebook, you will first need to set up the printer you want to use on your school's desktop computer. Once you have done this you can then set up the printer on your chromebook. You will need to have both computers on to be able to print from your chromebook. The directions below will explain the process.

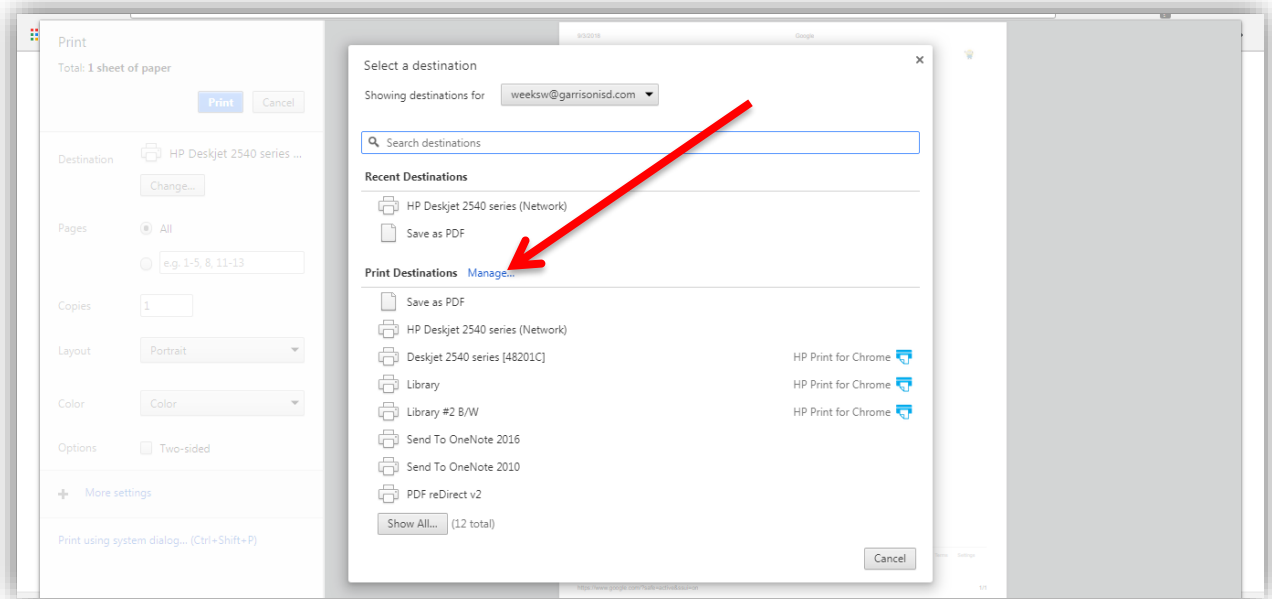

1. Go to the internet using your Chrome web browser.
2. Right Click on the page and select 'Print'

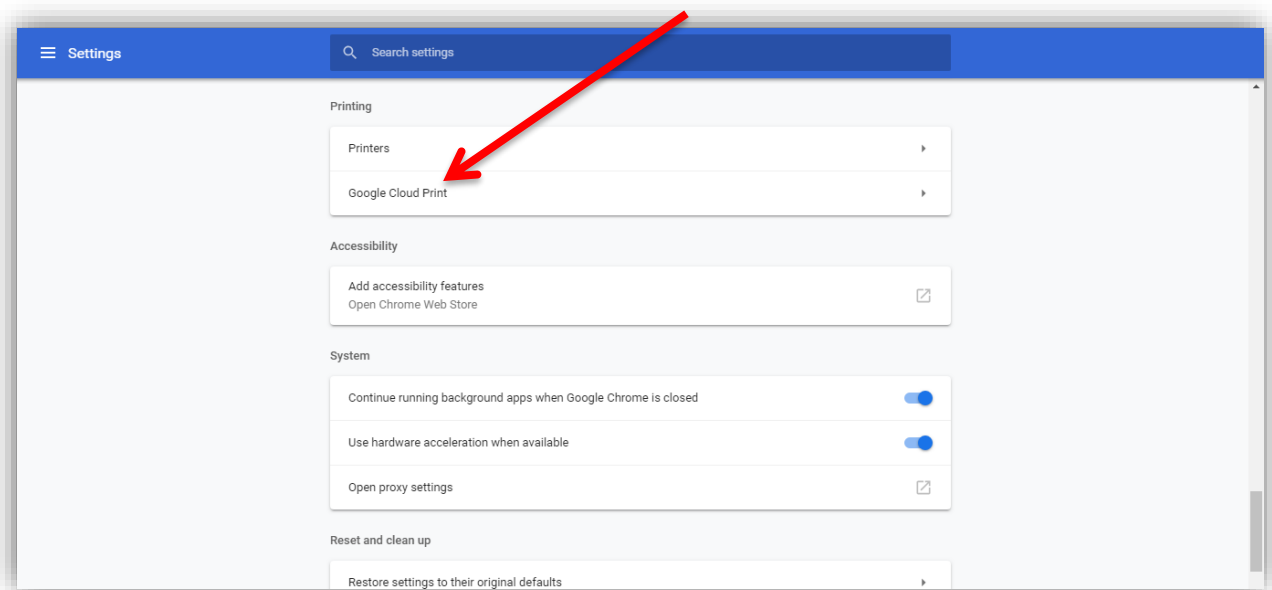

3. Click on 'Change' under Destination

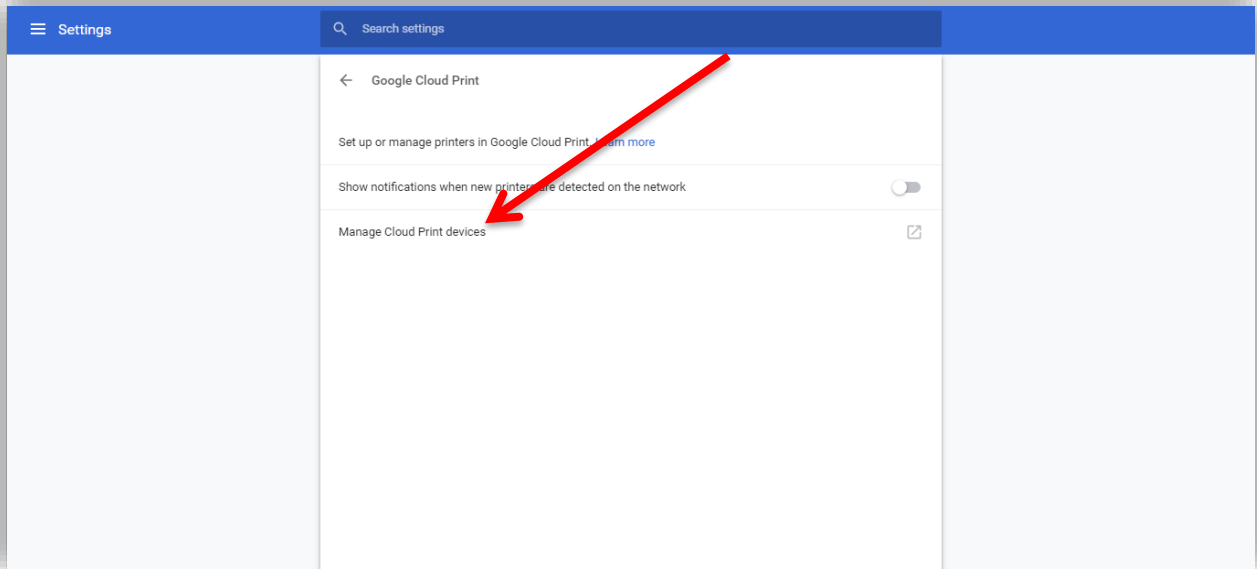

4. Next to Printer Destinations, click on 'Manage'

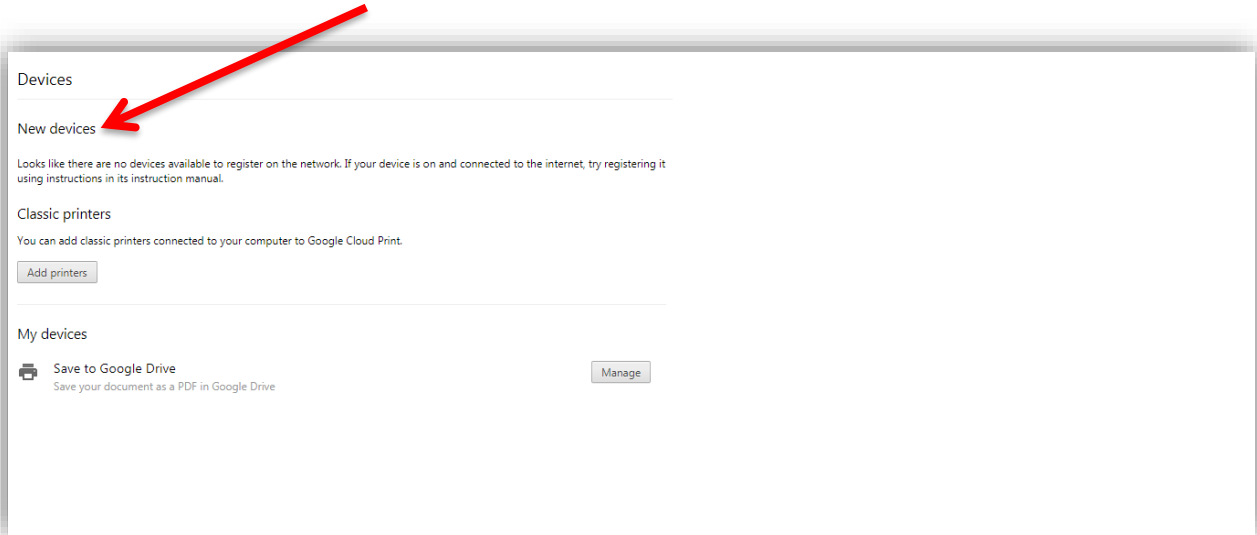

5. This takes you to the Settings page. Scroll down until you see the "Printing" section and click on 'Google Cloud Print'

6. Next, click on 'Manage Cloud Print devices'

7. Under 'New devices', all printers available to you will appear. Select the printer you would like to print to.

8. Once you have done this, you will need to repeat the same steps on your chromebook. Once you have added your printer to both your desktop computer and your chromebook, you should be able to print from your chromebook.
